

AI ECG SCREENING REPORT — CLINICAL DECISION SUPPORT

Clinical Decision Support — Subject to Mandatory Qualified Physician Review

1. PATIENT & RECORDING INFORMATION

Patient Name:	Ramesh Kumar	Hospital MRN:	MRN-789012
Age / Sex:	67 yrs / Male	Blood Group:	B+ (Positive)
Known Allergies:	NO KNOWN ALLERGIES	Smoking Status:	NOT PROVIDED
Existing Conditions:	Hypertension, Type 2 Diabetes Mellitus	Contact No.:	NOT PROVIDED
Current Medications:	Lisinopril 20mg OD, Metoprolol 50mg BD	Cardiac History:	Prior NSTEMI (2023)
Recording Date:	2026-09-24 17:46:12	Sampling Rate / Lead:	360.0 Hz (II)

■ CAUTION — MISSING CLINICAL INFORMATION: Smoking / tobacco status not documented.

2. VITAL SIGNS & LABORATORY CONTEXT (POINT-IN-TIME)

Blood Pressure:	138/84 mmHg	Serum Potassium (K+):	4.3 mEq/L
Heart Rate / SpO2:	74 BPM 98.0%	Serum Sodium (Na+):	NOT PROVIDED
Resp Rate / Temp:	16 bpm 36.8 °C	Creatinine / eGFR:	1.05 mg/dL 72.0 mL/min/1.73m ²
Cardiac Troponin:	NOT PROVIDED	BNP / NT-proBNP:	NOT PROVIDED

3. SIGNAL QUALITY & CARDIAC PARAMETERS

Signal Quality:	GOOD (Score: 1.0, SNR: 0.0 dB)	Heart Rate:	72.0 BPM (Normal Rate (60–100 BPM))
Baseline Drift:	False	Mean R-R Interval:	N/A ms
PR Interval:	Not reliably extracted	QRS Duration:	Not reliably extracted
QT / QTc Interval:	N/A	Detected Beats:	0 cardiac cycles

4. AI ABNORMALITY ANALYSIS (MULTIMODAL ECG CLASSIFIER)

PRIMARY MULTIMODAL FINDING (MODEL C): Normal Sinus Rhythm

Model Probabilities: Normal: 99.9% | PVC: 0.1% | Other: 0.0%

Model Comparison: Multimodal Model C Conf: 0.9 | ECG-Only Model A Conf: 0.9

Clinical Context Impact: ECG-driven classification. Patient context available for clinician synthesis.

Beat Breakdown: Normal: 0 (0.0%) | PVC: 0 (0.0%) | Other: 0 (0.0%)

4. ECG WAVEFORM & R-PEAK TRACE

5. FACTUAL FINDINGS & EXPLANATION

â€¢ Heart rate estimated at 72.0 BPM (Normal Rate (60–100 BPM)).

â€¢ Signal quality rated as GOOD (SNR: 0.0 dB).

â€¢ No premature ventricular contractions detected in the analyzed window.

Summary: The model classified the heartbeats as consistent with Normal Sinus Rhythm. The timing and waveform morphology align with standard ventricular depolarization cycles within the evaluated recording window.

6. CLINICAL DECISION SUPPORT (NON-AUTONOMOUS)

Triage Urgency: ROUTINE REVIEW	Primary Finding: Normal Sinus Rhythm
Clinical Advisory: Routine clinician confirmation and archival.	Guidelines: ACC/AHA/ESC

8. MEDICATION SAFETY AND INTERACTION EVALUATION

Active Regimen Evaluated: lisinopril 20mg od, metoprolol 50mg bd | **Safety Alerts:** 1

[CRITICAL] INSUFFICIENT CLINICAL CONTEXT: No verified patient clinical record linked to this safety evaluation.

8. CLINICAL REVIEW & PHYSICIAN SIGN-OFF

Review Status: PENDING_REVIEW	Reviewing Clinician: Pending Qualified Physician Review (Physician)
Medical Reg. No: N/A	Review Date/Time: Pending
Clinician Diagnosis: Awaiting attending physician sign-off.	Clinical Directives: None
Physician Signature: _____	Hospital Seal: [Electronically Authenticated]

IMPORTANT CLINICAL DISCLAIMER: This report was generated by an educational and research AI prototype. It is NOT an FDA/CE approved diagnostic device and should never be used as a substitute for professional clinical medical evaluation. If experiencing symptoms such as chest pain, syncope, or palpitations, consult a qualified physician or call emergency services immediately.
